

• AI INTELLIGENCE — VERIFIED BY DESIGN

How Truvi's **AI** turns raw data into verified intelligence.

A visual walkthrough for Truvi Ventures — the verification engine behind every project, builder and location record on the platform.

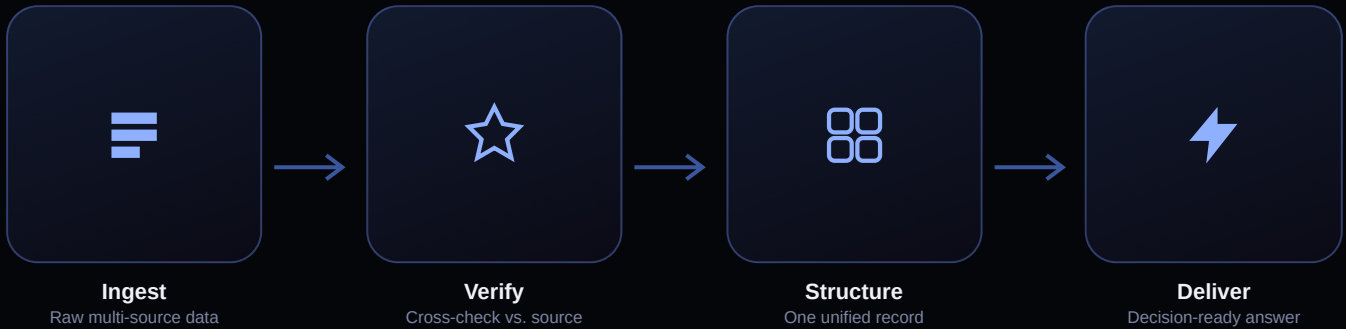

Real estate data is scattered across a hundred sources.

Brochures, RERA filings, news, site visits, government portals — each holds a piece of the truth, none hold the whole picture.

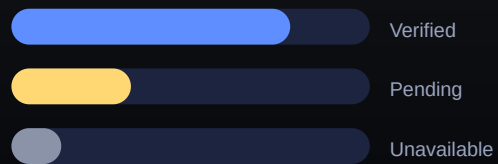

From raw records to decision-ready intelligence.

Every record moves through four checkpoints before it reaches you — nothing is shown until it has a source.

EVIDENCE, NOT ASSUMPTION

Every conclusion Truvi's AI states is traced back to the document, filing, or record it came from. If a fact can't be verified, it's labelled — never guessed.

What's verified, what's pending, what's unavailable.

Every record on Truvi is labelled at the field level — so you always know how much to trust each detail.

Skyline Meridian — Tower B Sample project record		
RERA registration number	✓ Verified	
Possession timeline	✓ Verified	
Builder litigation history	⌚ Pending review	
Amenity list (final)	⌚ Pending review	
Resale price history	— Unavailable	

Verified

Confirmed against an original source document.

Pending

Sourced, awaiting cross-verification.

Unavailable

No reliable source exists yet — clearly marked.

Every source feeding the model is verified by Truvi.

From master plans to ground-level records — each category below is checked, cross-referenced and kept current before it reaches the AI layer.

 LDA Master Plan ✓	 Village Boundaries ✓	 Land Use ✓
 Circle Rates ✓	 Registered Developers ✓	 RERA Projects ✓
 Schools ✓	 Hospitals ✓	 Metro ✓
 Highway Projects ✓	 Ring Road ✓	 Government Projects ✓
 Property Rates ✓	 Crime Data ✓	 Flood Zones ✓
 Future Infrastructure ✓	 Land Feasibility Rate ✓	 Climatic Condition ✓

Every category above is pulled from an authoritative source, dated, and re-checked on a cycle — so downstream answers carry the **Verified** label, not an assumption.

Organised. Understandable. Decision-ready.

The same three principles that shape the Truvi platform shape every answer its AI gives.

Organised

Project, builder, location and site data brought into one structured system.

Understandable

Complex records explained in simple language — with sources shown, not hidden.

Decision-ready

What's verified, pending or unavailable — clearly labelled before you decide.

T

Data comes first. Conclusions follow the evidence.

Truvi — the intelligence layer for real estate.
