

Truvi: Real Estate Operating System

From a website to a full-stack platform — Truvi's backend is its true competitive moat. Here's the complete architecture of modules that will power the future of real estate in India.

PLATFORM VISION

Why Backend is Truvi's Real Moat

The Problem

Most real estate platforms compete on UI and listings. They remain surface-level tools — fragmented, opaque, and disconnected from how deals actually happen on the ground.

- No real-time inventory visibility
- No CP accountability or tracking
- No unified commission management
- No data-driven decision making

The Truvi Answer

Truvi's backend becomes the operating layer that developers, channel partners, and investors all depend on — daily, deeply, and irreversibly. Once embedded, it becomes impossible to replace.

- Real-time data across all stakeholders
- Automated workflows end-to-end
- AI-powered intelligence layer
- Trust and compliance built-in

MODULE 01

Developer Dashboard

The moment a developer logs in, they have complete real-time control over their sales operation — no more relying on manual reports or delayed updates from field teams.

Inventory Control

Live view of available units, sold inventory, and booking pipeline updated in real time.

Sales Intelligence

Site visit analytics, lead source breakdown, and channel partner performance at a glance.

Financial Oversight

Revenue forecasting and commission liability tracker to stay ahead of cash flow.

Channel Partner Dashboard — Truvi's Most Critical Module

Channel Partners are the lifeblood of real estate sales in India. Truvi's CP Dashboard is designed to make every CP more productive, loyal, and successful — driving long-term retention and performance.

Project Discovery

Live inventory access, brochure downloads, price lists, and site visit booking — all in one place.

Lead Management

Submit leads, track status in real time, and never lose sight of a potential booking.

Commission Tracker

Full transparency on earned commissions, payment status, and invoice tracking.

Gamification & Leaderboard

Silver, Gold, Platinum, Diamond tiers reward top performers and fuel healthy competition.

Lead Management System

Every lead deserves a structured journey — from first contact to final registration. Truvi's LMS ensures no lead falls through the cracks and every touchpoint is tracked, measured, and optimized.

Key automations include auto lead assignment, duplicate detection, WhatsApp integration, call tracking, follow-up reminders, and AI lead scoring — creating a fully managed pipeline without manual intervention.

Site Visit Management

In real estate, the site visit is the single most important conversion metric. Truvi digitizes the entire experience — from scheduling to verification — ensuring every visit is tracked, verified, and reported.

Visit Scheduling & Driver Assignment

Seamlessly book visits and assign drivers, eliminating coordination chaos between CPs and site teams.

Pickup & Geo-Location Tracking

Real-time tracking of client pickup and geo-verified attendance confirmation at the site.

Site Visit Report

Automatic post-visit report generation — feedback, next steps, and follow-up triggers built in.

Commission Engine — Where Most Platforms Fail

Commission disputes are the #1 reason channel partners abandon platforms. Truvi's Commission Engine brings complete automation and transparency, turning a historically painful process into a competitive advantage.

1 Automatic Commission Calculation

Zero manual errors — commissions calculated instantly on booking confirmation.

2 Milestone-Based Release

Payments triggered automatically when defined project or payment milestones are reached.

3 TDS Calculation & Invoice Upload

Built-in TDS computation and invoice management for clean financial records.

The Result

Channel partners get full payment transparency — they can see what they've earned, when it's being released, and exactly what's pending. This trust is Truvi's strongest retention tool.

Inventory Engine — One Source of Truth

Real-time inventory visibility for both developers and channel partners — eliminating double bookings, miscommunication, and the costly errors of working from outdated price lists.

Plot Map Integration

Visual, interactive plot maps showing live unit availability.

Booking Lock System

Instant lock on unit selection to prevent simultaneous double bookings.

Dynamic Pricing

Price revision history and dynamic pricing tools give developers full control.

Reservation System

Temporary hold system for serious buyers without a full booking commitment.

 Both developers and CPs see the exact same live data — eliminating information asymmetry that currently costs lakhs in disputes.

AI Recommendation Engine — Truvi's Future Differentiator

Truvi's AI layer learns from every interaction, booking, and browsing pattern to deliver hyper-personalized intelligence — making both CPs and developers smarter with every login.

For Channel Partners

"Your last 6 bookings were in Lucknow premium plots. This new project matches your client profile exactly — we recommend prioritizing it this week."

For Developers

"Project A has seen slow inventory movement for 45+ days. Consider a targeted CP incentive campaign or a price revision to re-activate demand."

Truvi Trust Score™ — A Truly Unique Feature

Trust is the biggest missing element in Indian real estate. The Truvi Trust Score™ creates a verified, data-driven reputation layer for every participant on the platform — making accountability visible and measurable.

Developer Trust Score

- Project Delivery History
- Legal Compliance & RERA Status
- Customer Reviews
- Payment Transparency

CP Trust Score

- Conversion Ratio
- Customer Feedback
- Documentation Quality
- Professional Conduct

Investor Intelligence + Analytics Command Center

Investor Intelligence Module

Give investors the data they need to make confident decisions — turning browsers into buyers with credible, structured market intelligence.

- ROI Analysis & Rental Yield Projections
- Location Growth Trends
- Infrastructure Impact Mapping
- Live Market Trend Reports

Analytics Command Center

The founder's real-time view into the entire Truvi ecosystem — a single dashboard to track platform health and growth.

Total Revenue & Booking Value

Active Projects & CPs

Conversion Rates & Site Visits

City-Wise Growth Metrics

MODULE 11

Truvi Learning Academy

A well-trained CP is a high-converting CP. The Truvi Learning Academy removes the knowledge gap that holds most channel partners back — creating a certified, professional CP network that developers trust.

Video Courses

Structured modules on sales techniques, product knowledge, and legal basics — accessible on mobile anytime.

Certifications

CPs earn verifiable certificates on completion, which directly improve their platform ranking and Trust Score.

Rank Elevation

Certified CPs move faster through Silver → Gold → Platinum → Diamond tiers, unlocking better projects and higher commissions.

Truvi Connect + Virtual Project Experience

Truvi Connect — Internal Networking

A professional community platform connecting CPs and developers within the Truvi ecosystem — fostering collaboration, knowledge sharing, and real-time project updates.

Virtual Project Experience — Future Feature

The next frontier of real estate sales: immersive digital experiences that let buyers explore projects from anywhere in the world.

- 3D Project Tours with photorealistic renders
- Drone View of project site and surroundings
- Interactive Master Plans with live unit availability
- Virtual Site Visits for NRI and outstation buyers

AI Sales Copilot — Every CP's Smartest Tool

Most CPs lose deals not because of lack of effort, but lack of the right words at the right time. The AI Sales Copilot acts as a personal sales assistant — always available, always on-brand, and always improving.

WhatsApp Message Generator

AI-crafted follow-up messages personalized to each client's stage and interest.

Pitch Deck Generator

Auto-generated project pitch decks tailored to the client's investment profile.

Objection Handling Scripts

Pre-built responses to the most common buyer objections — price, location, delivery timeline.

Client Summaries

AI-generated meeting notes and client summaries to keep every interaction documented.

Truvi OS — The 10-Year Vision

Truvi is not building a product. It is building an ecosystem — a complete operating system for Indian real estate that every developer, CP, buyer, and investor will depend on.

MVP — First 6 Months: Build the Foundation

Not all 15 modules need to be built on Day 1. The MVP strategy is ruthlessly focused — build only what creates the deepest dependency and differentiates Truvi from 90% of local competitors immediately.

CP Dashboard

Project discovery, lead submission, commission tracking, and gamification — the CP's daily home base.

Developer Dashboard

Live sales control, site visit analytics, and revenue forecasting for every developer partner.

Inventory Management

Real-time unit availability, booking lock system, and dynamic pricing — one source of truth.

Lead Management CRM

Full lead lifecycle tracking with auto-assignment, WhatsApp integration, and AI scoring.

Site Visit Tracking

End-to-end visit management with geo-verification and automated reporting.

Commission Tracker

Automated calculation, milestone-based release, and full payment transparency for all CPs.

Phase Roadmap — Build, Scale, Dominate

Phase 1 — MVP (Months 1–6)

CP Dashboard, Developer Dashboard, Inventory Management, Lead CRM, Site Visit Tracking, Commission Engine. Achieve product-market fit and onboard first 50 developers.

1

2

3

Phase 3 — Ecosystem (Year 2+)

AI Sales Copilot, Truvi Connect, Virtual Project Experience, Truvi World 3D. Launch the full Real Estate Operating System across tier-1 and tier-2 cities.

Phase 2 — Intelligence (Months 7–12)

AI Recommendation Engine, Truvi Trust Score™, Learning Academy, Investor Intelligence Module, Analytics Command Center. Deepen platform stickiness.

Why Competitors Cannot Catch Up

Truvi's moat deepens with every transaction, every CP trained, and every developer onboarded. The data network effects make the platform exponentially more valuable over time.

1

Data Network Effect

More CPs → more leads → more bookings → better AI recommendations → more CPs join. A self-reinforcing loop competitors cannot replicate without the data.

2

Trust Infrastructure

Truvi Trust Score™ takes months to build for each user. Switching platforms means losing your reputation — the highest switching cost possible.

3

Workflow Dependency

Once developers and CPs run their daily operations on Truvi, it becomes their operating system — impossible to replace without disrupting live business.

4

Certified CP Network

The Learning Academy creates Truvi-certified professionals. Developers will prefer Truvi-certified CPs, making the certification itself a powerful demand driver.

The Opportunity Ahead

Indian real estate is a **₹50 lakh crore market** — and yet it runs largely on WhatsApp groups, Excel sheets, and handshake deals. The infrastructure layer that powers this market has never been built properly.

50L+

Crore Market

Total addressable market for Indian real estate operations

500K+

Active CPs in India

Unorganized, unverified, and underserved
— Truvi's core user base

90%

Ahead of Locals

MVP alone puts Truvi ahead of 90% of local competitors

The Vision: Truvi as the OS of Indian Real Estate

Every great technology company eventually becomes the infrastructure its industry runs on. Truvi's ambition is exactly that — to become so deeply embedded in how Indian real estate operates that the industry cannot imagine functioning without it.

Start with the Backend Build the 6 MVP modules. Make them indispensable for developers and CPs from Day 1.	Layer Intelligence Add AI, Trust Score, and Investor tools in Phase 2. The platform gets smarter with every user.
Build the Ecosystem Phase 3 connects every stakeholder — developers, CPs, buyers, investors — into Truvi OS.	Own the Category Truvi World, 3D experiences, and AI Copilot make Truvi the only platform the industry needs.

❏ The backend is not a feature. It is the foundation of Truvi's unbeatable competitive advantage.
