

Truvi

Complete Platform Workflow Guide

Role-by-role feature map, user journeys & API reference

Real-estate channel-partner & property intelligence platform. This document maps every role, every screen, every workflow and every backend endpoint in the application.

Roles covered	Admin / Founder · Developer · Channel Partner (CP) · Buyer · Ambassador · Verifier
Frontend	React + React Router + Tailwind (SPA)
Backend	Express + Drizzle ORM + PostgreSQL (Supabase), JWT auth, Socket.IO
Payments	Razorpay (orders + subscriptions), GST + platform fee + TDS engine
Generated	20 July 2026

1 · Platform Overview

Truvi connects four sides of a real-estate transaction on one platform: **Developers** who list projects and inventory, **Channel Partners (CPs)** who sell those units and earn commission, **Buyers** who discover, compare and buy verified property, and **Admins** who verify listings, run KYC, and manage revenue. A field **Ambassador** network performs on-ground site verification, and a **Verifier** role operates the AI-assisted verification engine.

Roles at a glance

Role	Signs in at	Home	Core purpose
ADMIN	/login	/admin/dashboard	Verify listings, KYC, payments, revenue, settings
ADMIN (Founder view)	/login	/founder/dashboard	Executive metrics, enquiries, platform settings
DEVELOPER	/login	/developer/dashboard	List projects, manage inventory, sales CRM, marketing
CP (Channel Partner)	/login	/cp/dashboard	Buy leads, sell units, earn tiered commission
BUYER	/login	/buyer/dashboard	Browse, compare, save, site-visit, loan/EMI, invest
AMBASSADOR	/ambassador/login	/ambassador/dashboard	Accept & complete paid site-verification tasks
VERIFIER	/login	/admin/verification	Operate the project verification engine

Access control

Every protected screen is wrapped in **ProtectedRoute** with an allowed-roles list. Admins can also enter the full Developer workflow and Truvi Connect community. Unauthorized access redirects to /unauthorized.

2 · Authentication & Onboarding (all roles)

Account approval by an admin has been removed — **every new account is auto-approved** and instead gated by a two-channel OTP: a user cannot log in until **both email AND phone are verified**. Sessions use a short-lived JWT access token plus an httpOnly refresh cookie (30 days).

Signup → verify → login journey

- 1 **Sign up** (/signup): choose role (Developer/CP/Buyer), enter name, email, phone, password. Developers also give company name & RERA number.
- 2 Account is created as **APPROVED** but **emailVerified=false, phoneVerified=false**. Six-digit OTPs are sent to email + phone (10-minute expiry).
- 3 **Verify** (/verify-email): enter both codes. Resend is available. Only when both are confirmed can the account log in.
- 4 **Log in** (/login): if unverified, the server sends fresh codes and routes back to verification (HTTP 403).
- 5 On success the client stores the access token; the refresh cookie silently renews the session via /refresh.

CP identity KYC (separate from login OTP)

- CPs complete a KYC bundle: **Aadhaar** doc + **PAN** doc + **live selfie**, plus phone/email OTP and PAN/Aadhaar format validation.
- KYC files are stored in a **private** (non-public) folder and streamed only to admins over an authenticated route, then deleted once decided.

- onboardingChecks tracks: aadhaarVerified, panVerified, phoneVerified, emailVerified, kycStatus (PENDING/APPROVED/REJECTED).
- Admins approve or reject KYC from /admin/kyc.

Auth API

Method	Endpoint	Purpose
POST	/api/auth/signup	Create account, issue email+phone OTP
POST	/api/auth/login	Email/password login (blocked until verified)
POST	/api/auth/verify-account	Confirm email + phone OTP
POST	/api/auth/resent-otp	Re-issue OTP codes
POST	/api/auth/refresh	Rotate access token via refresh cookie
POST	/api/auth/logout	Clear refresh cookie / session
GET	/api/auth/me	Current user profile + status
POST	/api/auth/verify-ambassador	Ambassador-specific verification
POST	/api/auth/request-phone-otp	Request phone OTP (KYC step)
POST	/api/auth/verify-phone-otp	Verify phone OTP
POST	/api/auth/request-email-otp	Request email OTP (KYC step)
POST	/api/auth/verify-email-otp	Verify email OTP
POST	/api/auth/upload-aadhaar	Upload Aadhaar/PAN/selfie KYC bundle

3 · Public / Unauthenticated Area

Anyone can browse the marketing site and public property inventory without logging in.

Public pages

Route	Page	What it offers
/	Landing	Animated hero, brand story, entry points to join/login
/intelligence	Intelligence	Property-intelligence showcase
/home	Home	Secondary marketing landing
/join	Join	Role selection to sign up (CP / Developer / Buyer)
/about	About	Company / product info
/inventory	Inventory	Public browse of verified projects & units
/inventory/:id/presentation	Presentation	Full project presentation deck
/inventory/:id/3d	3D View	3D / master-plan / satellite viewer
/pricing	Pricing	Plans (login-gated) for all roles
/legal, /terms, /refund-policy, /privacy	Legal	Policy pages
/login · /signup · /verify-email	Auth	Account access & verification

Always-on assistant

Ask Truvi (AI Q&A) and the **AI Sales Copilot** float on every page. The public inventory feeds an AI intelligence panel (crime index, flood risk, legal risk, price fit).

4 · Admin & Founder Workflow

Admins run the trust, money and content layers of the platform. The **Founder Dashboard** is an executive lens over the same data (metrics, enquiries, settings shortcuts).

Admin screens & options

Route	Screen	Options / actions
/admin/dashboard	Command Center	KPIs: total users, CPs, developers, buyers, projects, revenue, LTV/CAC, conversion; pending approvals
/admin/listings	Listings	Review all projects; open one to manage
/admin/listings/:id	Project Manage	Approve/reject listing, edit, set featured/prime, verify
/admin/verification	Verification Engine	Run & review AI verification checks, trust score, risk
/admin/kyc	KYC	Review CP KYC docs, approve/reject identity
/admin/payments	Payments	All Razorpay payments & subscriptions ledger
/admin/revenue	Revenue	Platform fee + lead-marketplace revenue breakdown
/admin/enquiries	Enquiries	Inbound enquiry inbox (buyer/developer/CP/guest)
/admin/ambassador-tasks	Ambassador Tasks	Create tasks, review completions, mark payouts paid

Route	Screen	Options / actions
/admin/settings	Settings	Platform-wide configuration
/founder/dashboard	Founder	Executive metrics, revenue command center, shortcuts

Verification-engine administration

Admins/Verifiers configure the AI verification engine that scores every project:

- **Checks** — create/edit/delete the individual verification checks that run against a project.
- **Fraud rules** — manage automated fraud-detection rules.
- **AI prompts** — manage the prompts driving AI analysis.
- **Thresholds** — tune the trust-score / risk-level cut-offs.
- **Audit logs** — full trail of verification decisions.

Admin API

Method	Endpoint	Purpose
GET	/api/admin/investor-metrics	Executive / investor KPI feed
GET	/api/admin/users	List all users
GET	/api/admin/projects	List all projects
PATCH	/api/admin/projects	Approve/reject/edit a project
DELETE	/api/admin/projects/:id	Remove a project
GET / PATCH	/api/admin/settings	Read / update platform settings
GET	/api/admin/kyc/pending	Pending CP KYC queue
GET	/api/admin/kyc/:userId/file/:type	Stream a KYC document (authed)
POST	/api/admin/kyc/:userId/decision	Approve / reject KYC
GET/POST/PUT/DELETE	/api/admin/checks	Verification checks CRUD
GET/POST/PUT/DELETE	/api/admin/fraud-rules	Fraud rules CRUD
GET/POST/PUT/DELETE	/api/admin/prompts	AI prompt CRUD
PUT	/api/admin/thresholds	Update verification thresholds
GET	/api/admin/audit-logs	Verification audit trail

5 · Developer Workflow

Developers list projects and drive sales. New listings enter as **PENDING** and go live only after admin approval + verification. A developer entitlement (plan) gates premium analytics.

Developer hub navigation

Route	Screen	Options / actions
/developer/dashboard	Overview	My projects, verified badge, live booking pipeline, inventory heat-map
/developer/inventory	Inventory	Manage units: add, price, status (Available/Locked/Reserved/Sold)
/developer/crm	Sales CRM	Leads & bookings for the developer's projects
/developer/analytics	AI Analytics	AI-driven sales & demand intelligence (plan-gated)
/developer/campaigns	Marketing	Promotion & campaign tools
/developer/projects/new	New Project	Create a listing (details, RERA, master plan, 3D, assets)
/developer/projects/:id	Project Detail	Edit a project, upload legal docs & assets
/cp/connect	Community Hub	Truvi Connect community (shared with CP/Admin)

List-a-project journey

- 1 Create the project (name, description, city, location, project type, RERA number, commission %).
- 2 Add media: master-plan image, 3D/Matterport or satellite embed, project assets (sketch, site plan, floor plans, elevations).
- 3 Upload legal documents (RERA, approvals, NOC, title) for verification.
- 4 Add inventory units with type, area, price and price history.
- 5 Submit — listing is PENDING until an admin approves and the verification engine scores it.
- 6 Once APPROVED & verified, the project appears in public inventory and to CPs/buyers; optionally FEATURED or Prime.

Developer API

Method	Endpoint	Purpose
GET	/api/developer/entitlement	Developer plan / feature entitlement
GET	/api/projects	List projects
GET	/api/projects/:id	Project detail
POST	/api/projects	Create a project
PATCH	/api/projects/:id	Update a project
GET/POST	/api/units	List / add inventory units
GET/PATCH/DELETE	/api/units/:id	Read / edit / remove a unit
POST	/api/units/:id/reserve	Reserve a unit
GET	/api/legal/project/:projectId	Project legal docs
POST	/api/uploads	Upload asset / document
POST	/api/ingest/:category	Ingest categorised project assets

Method	Endpoint	Purpose
GET	/api/revenue	Developer revenue view

6 · Channel Partner (CP) Workflow

CPs are the sales engine. They complete KYC, buy or receive leads, work them through a pipeline, lock inventory, close bookings and earn **tiered, milestone-based commission**. Seven hubs cover the full CP lifecycle.

CP hubs (left navigation)

Route	Hub	What's inside
/cp/dashboard	Overview	My leads, available units, leaderboard rank, submit-lead, commission snapshot
/cp/sales	Sales Hub	Lead pipeline board (New→Contacted→Interested→Site Visit→Negotiation→Booking→Registration→Completed), follow-ups, tasks, buyer timeline, call history, notes
/cp/ai	AI Hub	AI Copilot, fit-price & commission estimator, expected/estimated closing, CP-Pro upsell
/cp/business	Business Hub	KPI dashboard: today's/lifetime earnings, pending & paid commission, LTV, conversion, deal size, lead quality
/cp/academy	Learning Hub	Structured courses (sales, RERA/legal, negotiation, investment) with module progress tracking
/cp/connect	Community Hub	Truvi Connect: posts, discussions, tips, market updates, likes
/cp/growth	Growth Hub	Tier ladder, featured-profile boost, merch kit, premium perks
/cp/marketplace	Marketplace	Buy leads (filter by budget), pay-per-lead ordering

CP tiers (auto-assigned by confirmed bookings)

Tier	Min bookings	Meaning
SILVER	0	Entry tier — every new CP starts here
GOLD	5	Established performer
PLATINUM	15	High performer
DIAMOND	30	Top tier — best perks & visibility

Lead → booking → commission journey

- 1 **Acquire a lead** — buy from the Lead Marketplace (Razorpay), or submit/receive one directly.
- 2 **Work the pipeline** in Sales Hub: log calls/WhatsApp/email, add notes, set follow-ups & tasks, move the lead across stages.
- 3 **Lock a unit** — reserve inventory for the client (locks expire automatically, e.g. 20 min).
- 4 **Schedule a site visit** — book it, confirm attendance, upload site-visit photos, file the report.
- 5 **Close the booking** — booking value recorded; the commission engine computes the payout.
- 6 **Get paid across milestones** — commission releases 30% On Booking, 40% On Agreement, 30% On Registration.

Commission math (platform rules)

CP commission = bookingValue × project commission %. A **0.75% platform fee** is charged *on top* (never subtracted from the CP). **5% TDS** is withheld from the CP's commission as statutory tax. Net payable = commission – TDS, released per milestone (30 / 40 / 30).

CP API

Method	Endpoint	Purpose
GET/POST	/api/leads	List / create leads
PATCH	/api/leads/:id	Update a lead (stage, assignment)
GET/POST	/api/crm/leads/:id/activities	Lead activity timeline
GET/POST	/api/crm/followups	Follow-ups (+ per-lead create)
PATCH	/api/crm/followups/:id	Complete / update a follow-up
GET/POST	/api/crm/tasks	CRM tasks
PATCH	/api/crm/leads/:id/tags	Tag a lead
GET	/api/crm/summary	CRM summary metrics
GET	/api/crm/export	Export CRM data
POST	/api/units/:id/lock · DELETE .../lock	Lock / release a unit
GET/POST	/api/site-visits	List / schedule site visits
PATCH	/api/site-visits/:id/attendance	Confirm attendance
POST	/api/site-visits/:id/photo	Upload site-visit photo
PATCH	/api/site-visits/:id/report	File visit report
GET/POST	/api/commissions	Commission ledger
PATCH	/api/commissions/:id/milestones	Release a milestone
PATCH	/api/commissions/:id/invoice	Invoice a commission
GET/POST	/api/marketplace	Browse leads / (create-order, confirm) to buy
GET/POST/DELETE	/api/premium	CP-Pro subscription
GET/POST	/api/academy/progress	Course progress
GET/POST	/api/connect/posts	Community posts (+ like)
GET	/api/leaderboard	CP leaderboard ranking

7 · Buyer Workflow

Buyers discover verified property, compare options, run affordability tools, request site visits, manage documents and track investments.

Buyer screens & options

Route	Screen	Options / actions
/buyer/dashboard	Dashboard	Saved properties, site visits, my documents, loan calculator, saved calculations, investment tracker
/buyer/projects	Projects	Browse verified inventory, save/unsave, request site visit, view price list
/buyer/compare	Compare	Side-by-side project comparison
/inventory/:id/presentation	Presentation	Full project deck
/inventory/:id/3d	3D View	3D / master-plan viewer

Buyer journeys

- **Discover & save** — browse inventory, save properties to the dashboard, unsave anytime.
- **Compare** — add up to several projects and compare them side by side.
- **Loan / EMI** — Loan Eligibility Calculator returns eligible loan amount, max EMI and monthly EMI; calculations can be saved.
- **Site visit** — request a visit from any property card; track scheduled visits on the dashboard.
- **Documents** — upload buyer KYC docs (ID / address / income proof) which move UPLOADED → UNDER_REVIEW → VERIFIED.
- **Invest & track** — set investment goals and track purchased property (purchase date, current value, rental income).
- **Enquire** — send enquiries that land in the admin enquiry inbox.

Buyer API

Method	Endpoint	Purpose
GET	/api/buyer/dashboard	Dashboard aggregate
POST	/api/buyer/save · DELETE .../save/:projectId	Save / unsave a property
GET	/api/buyer/projects	Browse projects
GET/POST	/api/buyer/compare	Fetch / build a comparison
POST	/api/buyer/loan-eligibility	Loan / EMI calculation
POST	/api/buyer/investment-goals	Set investment goals
GET/POST/PUT/DELETE	/api/investments	Investment tracker CRUD
GET/POST/DELETE	/api/loan-checks	Saved loan calculations
GET/DELETE	/api/documents/my	Buyer's own documents

Method	Endpoint	Purpose
GET	/api/documents/shared	Documents shared with the buyer
POST	/api/site-visits	Request a site visit
POST	/api/enquiries	Submit an enquiry

8 · Ambassador Workflow

Ambassadors are the on-ground verification workforce. They sign up and log in through a **separate ambassador portal**, accept geotagged tasks, complete a photo checklist on site, and receive a payout once an admin approves.

Ambassador screens

Route	Screen	Options / actions
/ambassador · /ambassador/signup	Signup	Register as an ambassador (onboarding checks)
/ambassador/login	Login	Dedicated ambassador sign-in
/ambassador/dashboard	Dashboard	Available tasks, my tasks (in progress/completed), payout due, verification required

Task lifecycle

- 1 Admin creates a task (title, address, map link, deadline, photo instructions). Status = AVAILABLE.
- 2 Ambassador browses available tasks and **accepts** one — it becomes LOCKED to them.
- 3 On site, the ambassador ticks the **checklist** and uploads the required photos (entrance, RERA board, boundaries, amenities, etc.).
- 4 Ambassador marks the task **complete**; it awaits admin review.
- 5 Admin verifies and marks the payout **paid** — task status COMPLETED, payout cleared.

Ambassador API

Method	Endpoint	Purpose
GET	/api/ambassador-tasks	Available tasks
GET	/api/ambassador-tasks/:id	Task detail
POST	/api/ambassador-tasks/:id/accept	Accept / lock a task
POST	/api/ambassador-tasks/:id/checklist	Submit checklist items
POST	/api/ambassador-tasks/:id/complete	Mark task complete
POST	/api/ambassador-tasks	(Admin) create a task
GET	/api/ambassador-tasks/admin/all	(Admin) all tasks
PATCH	/api/ambassador-tasks/:id/paid	(Admin) mark payout paid

9 · Verifier & the Verification Engine

The Verifier role (and Admins) operate the AI-assisted verification engine at `/admin/verification`. Every project's trust score, risk level and individual checks stay **PENDING** until verified — nothing is pre-filled.

- **Checks** run against a project and resolve to VERIFIED / PENDING / UNAVAILABLE.
- A **fraud detector** applies configurable rules to flag suspicious listings.
- **AI prompts** generate context (crime index, flood risk, legal risk, price-fit intelligence).
- **Thresholds** translate scores into LOW / MEDIUM / HIGH risk and the public 'Verified' badge.
- All decisions are written to the **audit log**.

Verification API

Method	Endpoint	Purpose
POST	<code>/api/verify/:projectId</code>	Run verification on a project
GET	<code>/api/verification/:projectId</code>	Get a project's verification result
GET	<code>/api/property/:id</code>	Public property + intelligence
GET	<code>/api/legal/pending</code>	Pending legal-doc verifications
PATCH	<code>/api/legal/:id/verify</code>	Verify a legal document
GET	<code>/api/inventory/:id/intelligence</code>	AI intelligence for a listing

10 · Cross-Cutting Systems

Payments & subscriptions (Razorpay)

- One-off payments: create-order → checkout → verify signature → status CREATED→PAID/FAILED. Amounts stored in paise with GST.
- Subscriptions: create-subscription → verify; states CREATED→ACTIVE→CANCELLED/COMPLETED/FAILED. Plans mapped in `subscription_plans`.
- Used by: CP lead purchases (marketplace), CP-Pro/premium, developer plans. Admin sees every payment at `/admin/payments`.

Method	Endpoint	Purpose
GET	<code>/api/payments/config</code>	Razorpay public config
GET	<code>/api/payments/mine</code>	My payments
POST	<code>/api/payments/create-order</code>	Create a payment order
POST	<code>/api/payments/verify</code>	Verify payment signature
POST	<code>/api/payments/create-subscription</code>	Start a subscription
POST	<code>/api/payments/verify-subscription</code>	Verify a subscription
GET	<code>/api/payments/</code>	(Admin) all payments

Lead Marketplace

CPs buy leads: filter by budget, place a Razorpay order (create-order), and confirm to take ownership. Marketplace revenue is a distinct line item in admin revenue.

Notifications & realtime

- Socket.IO pushes live notifications (new lead, KYC decision, milestone release, task updates).
- GET /api/notifications, PATCH /:id/read, PATCH /read-all.

AI features

- **Ask Truvi** — global AI Q&A (POST /api/ask, chat history at /api/chat/:sessionId).
- **AI Sales Copilot** — assists CPs while working leads.
- **Listing intelligence** — crime index, flood risk, legal risk, price-fit cards on inventory.
- **AI chat** — POST /api/ai/chat with a health check at /api/ai/chat/health.

Key data enums (state machines)

Domain	States
User role	ADMIN · DEVELOPER · CP · BUYER · AMBASSADOR · VERIFIER
Approval	PENDING → APPROVED / REJECTED
CP tier	SILVER → GOLD → PLATINUM → DIAMOND
Unit	AVAILABLE → LOCKED → RESERVED → SOLD
Lead stage	GENERATED · ASSIGNED · CONTACTED · INTERESTED · SITE_VISIT · NEGOTIATION · BOOKING · REGISTRATION · COMPLETED · LOST
Site visit	SCHEDULED · CONFIRMED · COMPLETED · CANCELLED · NO_SHOW
Commission	PENDING → MILESTONE_DUE → INVOICED → PAID
Payment	SIMULATED · CREATED → PAID / FAILED
Buyer doc	UPLOADED → UNDER_REVIEW → VERIFIED
Ambassador task	AVAILABLE → LOCKED → COMPLETED

Seed / demo logins (password: Password123!)

admin@truvi.app & founder@truvi.app (Admin) · buyer1@truvi.app (Buyer) · dev1–dev4@truvi.app (Developer) · cp1–cp8@truvi.app (CP, Silver→Diamond) · ambassador1@truvi.app (Ambassador, /ambassador/login). Change these before production.
